

# Score Planner™

## Take control of your security rating and easily boost your score

Score Planner provides full transparency into how specific issues impact scores and automatically generates a recommended plan of issues to remediate in order to achieve a “target” letter grade. If the recommendations do not fully meet your company’s security priorities, the plan can be customized or easily recreated using SecurityScorecard’s simple user interface. Once a plan is ready, you and your teammates can download it as a CSV for convenient integration with your issue tracking systems.

## Capabilities

### Use Score Planner to:

- Identify the information and tools you need to improve your scores to desired levels
- Prioritize issues that will improve your company’s security ratings
- Gain transparency into the results of specific issue remediations
- Select one or more issues for remediation and see, if fixed, how the overall grade will improve
- Autogenerate a detailed plan for specific issue remediation that will achieve a target letter grade
- Calculate the minimum number of issues required to remediate in order to attain a desired score improvement

### *Continuously Monitor the Security Health of Any Organization*

SecurityScorecard provides instant visibility into enterprise security posture as well as the cyberhealth of all vendors and partners in any organization’s ecosystem. The platform uses trusted commercial and open-source threat feeds, and nonintrusive data collection methods, to quantitatively evaluate and continuously monitor the security posture of thousands of organizations worldwide. SecurityScorecard delivers the most accurate, transparent, and comprehensive security risk ratings available for small to large enterprises in every industry sector.

## Get Started

Creating a Score Plan is the first step. Go to the Issues page for your scorecard. Once there, click on “Improve Your Score.” Specify your target letter grade and we’ll generate a plan to help you achieve that letter grade by addressing the fewest number of issues possible. You can manually revise your plan or create your own from scratch on demand. Once your plan is finalized, you can download it as a CSV for convenient access.

**Try the new SecurityScorecard Score Planner today. Whether you are a vendor that needs to maintain a specific score or letter grade, or a customer that wants to improve your enterprise score, let Score Planner show you the way. At SecurityScorecard, we’re prioritizing fair, accurate, and transparent security ratings. Score Planner leverages this commitment by helping you take control of your rating and easily boost your score.**
